

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A one-piece golf ball formed by vulcanization from a rubber composition composed of 100 parts by weight of rubber base material, 10 to 40 parts by weight of unsaturated carboxylic acid, 10 to 60 parts by weight of metal oxide, and 0.9 to 5 parts by weight of organic peroxide, said rubber base material containing 60 to 100 % by weight based on the weight of a polybutadiene which is synthesized with a catalyst of rare earth element, contains no less than 60% of cis-1,4-linkage, and has a Mooney viscosity ( $ML_{1+4}(100^{\circ}C)$ ) no less than 52,

wherein the rubber base material contains, in addition to the polybutadiene, no more than 40 % by weight of a second polybutadiene which is synthesized with a catalyst of Group VIII element and has a Mooney viscosity ( $ML_{1+4}(100^{\circ}C)$ ) less than 50.

2. (original): The one-piece golf ball of claim 1, wherein the polybutadiene is one which has a molecular weight distribution Mw/Mn of 2.0 to 8.0 (where Mw stands for weight-average molecular weight and Mn stands for number-average molecular weight).

3. (original): The one-piece golf ball of claim 1, wherein the polybutadiene is one which is obtained by synthesis with an Nd-based catalyst and subsequent reaction with a terminal modifier.

4. (canceled).

DO NOT ENTER 2/23/04

5. (currently amended): The one-piece golf ball of ~~claim 4~~ claim 1, wherein the second polybutadiene is one which has a molecular weight distribution Mw/Mn of 3.0 to 6.0 and a solution viscosity no less than 100 mPa·s and no more than 500 mPa·s in toluene (5 % by weight) at 25°C.

6. (original): The one-piece golf ball of claim 1, wherein the rubber base material contains (based on 100 parts by weight) 0.2 to 5 parts by weight of organic sulfur compound.

7. (currently amended): A one-piece golf ball formed by vulcanization from a rubber composition composed of 100 parts by weight of rubber base material, 10 to 40 parts by weight of unsaturated carboxylic acid, 10 to 60 parts by weight of metal oxide, and 0.9 to 5 parts by weight of organic peroxide, said rubber base material containing 60 to 100 % by weight based on the weight of a polybutadiene which is synthesized with a catalyst of rare earth element, contains no less than 60% of cis-1,4-linkage, and has a Mooney viscosity ( $ML_{1+4}(100^{\circ}\text{C})$ ) no less than 52  
~~The one-piece golf ball of claim 1, wherein the rubber composition contains two or more kinds of organic peroxide, the one with a shortest half-life (at 155°C) being designated as (a) and the other with a longest half-life being designated as (b), such that the ratio  $b_i/a_i$  is no less than 7 and no more than 20, where  $a_i$  denotes the half-life of (a) and the  $b_i$  denotes the half-life of (b).~~

8. (canceled).

9. (canceled).

10. (canceled).

11. (new): The one-piece golf ball of claim 7, wherein the polybutadiene is one which has a molecular weight distribution  $M_w/M_n$  of 2.0 to 8.0 (where  $M_w$  stands for weight-average molecular weight and  $M_n$  stands for number-average molecular weight).

12. (new): The one-piece golf ball of claim 7, wherein the polybutadiene is one which is obtained by synthesis with an Nd-based catalyst and subsequent reaction with a terminal modifier.

13. (new): The one-piece golf ball of claim 7, wherein the rubber base material contains (based on 100 parts by weight) 0.2 to 5 parts by weight of organic sulfur compound.
